

## **Industrial Contribution In Rural Development of North Karnatak**

**G B Murgod**

Head, Dept of Economics Government First Grade college DHARWAD 580008  
Karnatak State

---

### **Introduction**

Industrialize or Parries the words of Sir M vishwesharaiyya. Industries play an important role in a economy The key to our success in employment lies in the success of manufacturing in the small scale sector Industrialization will definitely help to broaden a country's economic base because it carries diver Ossification further into a new are a of activity. Industrialization is a process of economic development where an increasing proportion of home resources mobilized to establish a technologically up to data and diversified economic structure. This economy is characterized by dynamical processing industry producing means of production and consumer goods suitable for making the fast development of the total national economy. Industrialization accelerates economic development through structural transformation.

Economic development implies significant changes in the sectoral composition of income and employment. And by definition industrialization involves fundamental changes in the structure of an economy both in terms of output and occupational pattern of work force. As a first step

Industrialization initiates shift away from the land based agriculture and allied activities to the man and machine based secondary and tertiary economic activities. Such a shift, which moves workforce from the relatively low productivity economic activities to the relatively high productivity economic activities, accelerates economic development. Industrial development, which is the major cause of economic development, gets concentrated in some regions and economic development, which is led by industrialization, takes place in the surrounding regions.

Before independence the pattern of industrial development in India was marked by a heavy concentration of industries in a few regions. Even after independence, when industrialization was accepted as a means of economic development, industrial investment started to flow towards the existing cities with industrial infrastructure while backward regions of the country continued to lie behind. Industries continued to be concentrated in and around the developed regions by concentrating capital, employment and income. Development of industries in the backward regions is accepted as a means to reduce regional disparities as it is dynamic, flexible and has better potentiality for generating employment directly and indirectly through their backward and forward linkages with other sectors of the economy. Industrial development would create an impact on income levels and pull the region out of its backwardness and promote regionally balanced development.

Decentralization of industries is necessary for balanced regional development in a country with several backward areas. Some of them have rich mineral potential or rich forest resources to augment the per capital income of the people. The tendency to set up industries in developed areas is encouraging exodus of rural population resulting in concentration of urban growth and environmental pollution, which needs to be dissipated for creation of new urban centers in under developed areas with a view to achieving better socio economic growth. It is an effort in which the under developed

country place a major hope of finding a solution to their problems of poverty, insecurity and over population and ending their newly realized backwardness in the modern world .Four decades of post Independence industrialization has changed the structure and growth pattern of the economy by creating new growth centers and enabling new entrepreneurs to emerge. Both public and private sectors have explained considerably and a comfortable heavy and basic industry base has been created along with the expansion of small scale sector. In the meanwhile, small-scale industries relying on some modern or semi Modern machines also appeared in the cities and also in small and medium towns where the artisan castes began to shift to small-scale industry. Mechanics, workshops, manufacture of metal, agricultural tools and electrical appliances, etc.

### **Definition of Small Scale and Cottage Industries**

A significant feature of the Indian economy since Independence is the rapid growth of the small industry sector. In the Industrial Policy Resolutions of 1948 and 1956, the small sector was given special role for creating additional employment with low capital investment. A new thrust was given in favour of small units by the Industrial Policy Statement of 1977. In 1950, the government grouped small-scale industrial undertakings into two categories those using power but employing less than 50 persons. All small-scale enterprises, however, had capital investment of less than Rs. 5 lakhs. None of these criteria taken singly would be a determining test as they undergo changes over a period of time. The third criterion, namely, the character of organization and management, also cannot be considered a sound basis of classification. Apparently, the standing feature of small scale enterprises seems to be the personal character of its organization and management in contrast with the predominantly impersonal organization and management of large corporations. In small enterprises management is predominantly proprietary with individual ownership or partnership. But the ownership and management may also be identical in some of the large-scale industries. The criterion, therefore, becomes vague and inappropriate.

In 1966, the smallscale enterprises were defined as undertakings with a fixed capital investment of less than Rs. 7.5 lakhs and ancillaries with a fixed capital investment of Rs. 10 lakhs. Investment will imply investment in fixed assets in plant and machinery, whether held in ownership term or by lease or by hire purchase. In 1975 this limit was revised to Rs. 10 lakhs for small-scale enterprises and Rs. 20 lakhs in case of ancillaries. Subsequently, under the Industrial Policy Statement of 1980, this limit was further raised to Rs. 20 lakhs in case of smallscale units and Rs. 25 lakhs in case of ancillary units. Simultaneously, in the case of tiny units, the limit of investment has been raised from Rs. 1 lakh to Rs. 2 lakhs. In March 1985, the Government has again revised the investment limit of smallscale to Rs.35 lakhs and for ancillary units to Rs. 45 lakhs.

### **Need for the study**

In the proceeding discussion, some of the important empirical studies conducted with special reference to the small scale industries in various areas have been reviewed. However, there have been contradictory results that emerged from these studies. For instance some of those studies and in favour of the financial and marketing support given by the government, while some other are against on the other hands certain studies conclude that SSI sector is efficient whereas certain other studies opine that the SSI sector is inefficient. This section documents the statement of the problem chosen for the present study and lists the main objectives. Hypothesis and key concepts used. Further, it also presents information about methods of data collection and small scale industrial setting in Shimoga district.

### **Statement of Problem**

The condition industries is not so well particularly, one out of every six unit is found to be unhealthy or sick. Chronic shortage of power, raw material constraints working capital hassles owing to inconsistent bank leading, management failures and other problems have been experienced by small scale units. In spite of provision of several incentives and concessions by the government for promotion of SSI, the growth of SS industrial units Shimoga district is not so satisfactory, and the district is considered as industrially backward. According to government of Karnataka Industrial policy. So for no systematic study has been done on the problems of SSI in the district. Nature of the problems faced by different categories of SSIs will logically be different from each other. The various problems of the SSIs need to be identified and critically analyzed before actually suggesting any measures to develop these SSIs. Thus a systematic study to find out the particular problems encountered by different categories of unit is needed. This kind of study will help the government to provide incentives and concessions, because, based on the nature and extent of problems faced by the SSIs, the nature and extent of incentives and concessions offered by the Government should vary with such an approach only, the balances regional industrial development could be achieved. With this background in mind, the researcher undertook the following investigation, "problems and prospects of small scale industries. A case study of Shimoga district, Karnataka State.

### **Scope and Limitation of the Study**

The following guidelines for the scope of research.

- 1) The scope of the study is limited to small scale units, where the investment in plant and machinery is Rs. 5.00 Lakhs to Rs. 1 crore. In other words, the study does not cover the tiny and ancillary units.
- 2) The study considers only registered units with DIC unregistered units do not form part of this study.
- 3) The study also attempts to examine the entrepreneur's engaged in the manufacturing and servicing of six product groups to facilitate an in depth study.
- 4) One of the serious limitations of the present study is that it covers 5 years from 2004-05 to 2008-09 Government of Karnataka.

### **Objectives**

- i) To examine shifts in India's small industry policies and their impact on the growth of small scale industrial sector.
- ii) To study different sources of finance and to analyse the impact of interest rates and subsidy on production and profit of small scale industrial unit.
- iii) To study price determination practices and to analyse marketing problems of small scale industrial units

### **METHODOLOGY KEY CONCEPTS**

In this study, certain key concepts have been used for the purpose of collection and analysis of data such as small scale, tiny and ancillary industries. It is used to classify industrial units on the basis of the investment in terms of their capital. Thus on this basis, the following types are arrived at.

Industrial undertakings having investment in fixed assets in plant and machinery, not exceeding Rs. 5.00 Lakhs are considered as tiny industries. Industries with an investment not exceeding Rs. 50.00 Lakhs and Rs. 60.00 lakhs respectively are considered as small scale industries and ancillary industries. This definition is based

on the norms adopted by the government of India for classifying small scale industries.

### **TOOLS OF ANALYSIS**

To explain both primary and secondary data and to interpret the simple statistical tools such as

Percentage method, ratios, growth rate are employed in the study. The necessary charts are also used to make the data easily Understandable and in order to test the verified hypothesis was used for the visual representation.

### **FINANCIAL AND PRODUCTION RELATED PROBLEMS OF SSI UNITS**

This is based on the primary data collected The first section attempts to present the production line, type of units, organizational structure, investment in plant and machinery, nature of acquisition, source of finance, cost of loan finance, source of term loans, subsidy of units, subsidy amount financial incentives and financial problems like time gap between sanction and receipts of loan, hire purchase of machinery, delay in obtaining incentives, problems in obtaining loan finance, source of working capital and problems of working capital. The second section records SSI units' information pertaining to the industry established. Here an attempt has been made to examine the nature of production, value of production, reasons for decrease in production, source of raw material, raw material purchasing channels, difficulties in obtaining the raw material, total value of required and actual quantity of raw material purchasing channels, difficulties in obtaining the raw material, total value of required and actual quantity of raw material, source of power, regular shortage of power, inadequate supply of power, capacity utilization, reasons for loss of units, reasons for under utilization of capacity and overcoming measures of under utilization of capacity, etc.

#### **General Information about the Units**

Totally 97 units have been established throughout the district at the time of the study period. The units selected for study are broadly divided into six categories according to the types of goods they are manufacturing. This categorization is adopted from the classification of khadi and village industries commission. Hence, in accordance with the above mentioned categorization it has classified the industries and analysed. This classification is shown in the Table No. 5.

table No. 5.1

**Product-wise Classification of Units**

<b>Product</b>	<b>Number of Units</b>	<b>Percentage</b>
Food Product	41	42.27
Mineral Product	39	40.21
General Engineering	9	9.28
Stone Crushing Product	1	1.03
Wood and Wooden Product	4	4.12
Printing	3	3.09
Source: Field Survey		

The table No. 5.1 shows the product wise classification of units. Out of the total 97 SSI units in Shimoga district 41 (42.27 per cent) were engaged in food products, whereas mineral products with 39 units (i.e., 40.21 per cent) are the second largest group among the total number of units, followed by General Engineering 9 units (i.e., 9.28 per cent), Wood and Wooden Product 4 units (i.e., 4.12 per cent) Printing 3 units (i.e., 3.09 per cent) and stone crushing 1 units (i.e., 1.03 per cent). It is interesting to note that the district is agriculturally dominant and inputs are available adequately for food product industries. Therefore, the food products industries dominate over the other industries. The second major industries are the mineral products, as there is sufficient supply of mineral areas.

**Table -5.2**

Type of the Unit	Units	Manufacturing Service	Total
Food Product	27 (45.76)	14 (36.84)	41 (42.27)
Mineral Product	23 (38.98)	16 (42.11)	41 (42.27)
General Engineering	4 (6.78)	5 (13.16)	9 (9.28)
Stone Crushing Product	1 (1.69)	-	1 (1.03)
Wood and Wooden Product	3 (5.08)	1 (2.63)	4 (4.12)
Printing	1 (1.69)	2 (5.26)	3 (3.09)
<b>Total</b>	<b>59 (100.00)</b>	<b>38 (100.00)</b>	<b>97 (100.00)</b>

Source: Field Survey

Table No. 5.2 indicates that as many as 59 units (60.82 per cent) are functioning as Manufacturing units and only 38 (39.18 per cent) are functioning as service among total units of the study. According to product categories food products units are functioning as manufacturing units that account for 27 (45.76 per cent) 14 (34.15 per cent), functioning service unit among 39 mineral products, 30 units (39.18 per cent) are functioning as manufacturing and 14 units (36.84 per cent) are functioning as service units. In the case of General Engineering units 4 (6.78 per cent) of total are functioning as manufacturing and only 5 (13.16 per cent) are functioning as service units. While in stone crushing unit 1 (1.69 per cent) functioning as manufacturing and none of percentage in functioning as service unit. In the case of remaining two categories of wood products and printing products, all the units are as manufacturing units which account for 3 (5.00 per cent) and 1 (2.63 per cent) respectively. It is clear from the above table that manufacturing units dominate over the service units.

#### **Source of Finance**

Finance is one of the most important and significant pre requisites to establish an industry.

Several economists like Cameron and Patrick writing on the important of finance hold that Finance is the lubricant in the process of production and in turn economic development. An Entrepreneur can raise finance from various sources. The small scale industry is considered as one of the priority sectors for the purpose of lending. Bank gives loans for acquiring machinery, Equipment and construction of factory as well as required working capital for the SSI units. This credit becomes a pervasive force in today's modern industrial economy.

Further relatives, friends, money lenders and private financial agencies are called non-institutional sources of finance. There is also the source of finance for many SSI units. Therefore, Entrepreneurs are expected to depend on various institutional and non-institutional source of Finance either for establishment or for expansion and modernization. Hence, an attempt has been made to cast light on the investment in plant and machinery, various source of finance, term-loan and their problems at the time of getting loans from their source problem of working capital etc., are all investigated.

### **Classification of Units**

As close observation of the table No. 5.2 shows that among 41 food products units, the investment by as many as 8 units, (19.51 per cent) in plant and machinery invested between 5 lakh to 10 lakh whereas that of 17 (41.46 per cent) are between Rs. 10 lakh to 15 lakhs. Each of remaining two units invested Rs. 15 lakhs to 20 lakhs and 20 lakh to 25 lakhs respectively. And above 25 lakhs all units, similarly majority of the food products units 41 (42.27 per cent) invested anywhere between Rs. 5 lakh to Rs. 10 lakh in plant and machinery. Among rest of the units mineral, General Engineering, Stone Crushing, Wood

and Wooden and Printing is none. Rs. 10 lakhs to 15 lakhs the investment of Food Product, General Engineering and Wood and Wooden Product is between 10 lakhs to 15 lakhs. Food product 8 (19.51 per cent) Mineral Product 4 (10.26 per cent), General Engineering 4 (44.44 per cent) and Wood and Wooden

Product 1 (25.00 per cent) invested, whereas 20 lakhs to 25 lakhs only few product are Food Product 5 (12.20 per cent) and General Engineering 3 (33.33 per cent) invested. Table No. 5.2 reveals that majority of firms in all the categories owned units rather than purchased and hired. Nearly 22 (56.40 per cent) mineral product units and 20 units (48.80 per cent) food product units following general engineering products 4 (44.40 per cent) and next unit wood and wooden 3 (75.00 per cent) and printing 2 (66.70 per cent) followed least the stone crushing unit 1 (100.00 per cent) of acquisition of the units. Similarly, purchased units have 14 (35.60 per cent) mineral products and 6 units (14.60 per cent) food product units and following general engineering product, wood and wooden and printing products are acquisition of units. So hired is 15 (36.60 per cent) in food product units and general engineering units 4 (44.40 per cent) and the next follows mineral products. Similarly, owned nature of acquisition is dominates the others.

**Table-5. 6**  
**Sources of Finance for Plant and Machinery**

Sources of Finance	Banks	KSFC	Term Lending Institutions	Private Finance Corporation	Private Money Lenders	Own Funds
<b>Food Product</b>	<b>8(19.50)</b>	<b>11(26.80)</b>	-	<b>1 (2.40)</b>	-	<b>21(51.2)</b>
<b>Mineral Product</b>	<b>13(33.30)</b>	<b>19(48.70)</b>	-	<b>7 (17.90)</b>	-	-
<b>General Engineering</b>	<b>4(44.40)</b>	<b>4 (44.40)</b>	<b>1 (11.10)</b>	-	-	-
<b>Stone Crushing</b>	<b>1(100.00)</b>	-	-	-	-	-
<b>Wood and Wooden Product</b>	-	-	-	<b>1 (25.00)</b>	<b>1 (25.00)</b>	<b>2(50.00)</b>
<b>Printing</b>	<b>1(33.30)</b>	-	<b>23</b>	-	-	<b>2(66.70)</b>
Source Field Survey						

Figures in parentheses indicate percentages to total. When the SSI units were asked as to whether they availed subsidy on the loan, the response of majority of units was positive (Table-5.8). All the units of mineral products, general engineering, stone crushing and printing borrowed government subsidy on the loans. Whereas in the case of mineral products units and general engineering units only (65.00 per cent) and 15.00 per cent obtained subsidy on the finance availed while the remaining did not. Subsidy given agencies 24. Three different agencies have given subsidy on finance to the SSI units. Figures in parentheses indicate percentages to total. A perusal of table indicates that for a majority of the units under different categories, the subsidy comes from the KSFC. The second and third major sources of subsidy were other financing institutions 18.42 per cent and Commercial Bank 7.89 per cent. In the case of food product units other financial institutions (17.95 per cent) and Commercial Bank are the subsidy giving agencies with 2.56 per cent in mineral product units, commercial bank 44.44 per cent and other financial institutions (11.12 per cent) in general and printing units.

After analyzing the share of different agencies in the subsidy availment by the SSI units.

Attempts to further classify the SSI units based on the amount/extent of subsidy (as percentage of finance) in general, the extent of subsidy was more than 9 percentage loan financed in most of the firms across categories of units. The table 5.10 shows 36.60 percentage with regard to products of the following 30.80 per cent Mineral Products. 5-9 percentage subsidy loans. The general engineering unit is 44.4 percent; the next follows wood and wooden products and printing product unit, availing the subsidy loans. Only stone crushing units are not availing any subsidy loans. And above 20 per cent subsidy loans is food product and mineral product units having availed the subsidy loan. None of the units have above 20 percent of subsidy of loans. Following future aspects of SSI units as accepted by 13 (31.70 per cent) of food products, 26 (66.70 per cent) mineral products, 5 units (55.60 per cent) general engineering units (75.00 per cent) wood and wooden product 2 units (66.90 per cent) printing units, followed by incentives scheme has opined by 13 (31.70 per cent) food product units, 12 (30.80 per cent) mineral product units, 3 (33.30 per cent) general engineering products, 1 (25.00 per cent) wood and wooden products good demand for the products next important factors favorable for good prospects in future for the SSI units as respondent by 2 units (4.90 per cent), food products, 1 units (4.10 per cent) none from other product units. These for all the categories of units in the study area good demand for more important from the point of view, of the future prospects of the SSI units.

#### **Unfavourable Steps of Government Towards SSI Units**

Everything is not well in connection with SSI unit's development because government has taken several incentives to promote SSI units in a big way. But all these incentives like, financing marketing product reservation purchasing etc., are not favourable to SSI units. So SSI units have no positive attitude about these incentives. Therefore, researcher has made an attempt to find out what are the unfavorable steps taken by govt. towards SSI units during the survey period.

Table No. 5.28 presents the unfavourable steps of government toward, SSI units during the study period. Table 5.29 brings clearly the steps taken by government that are unfavourable to SSI development. They are high rate of interest in the government agencies at the time of starting the unit rigid regulation on loan officials information's, problems collection of subsidy on purchase of raw materials by units higher sales of taxation on SSI products, higher electricity change import of edible oil and rice, rigidity payment undivided finance institution. Further the problem like greater Performance given by government to big units environment control notice problems of Government agency unlimited finance for new unit for establishment oil purchasing and trademark Competition in market yard are also the important unfavourable steps government forward SSI units as reported by the research study.

#### **Unfavourable steps taken by government Expected Assistance Programmes from Government by SSI Units SSI Units in Study Area**

SSI units in study area have expected several kinds of assistance, incentives from government for their future prospects. The researcher has made an attempt to find out different kinds of assistance that were expects by SSI units from the government in the study area indicates the different kinds of assistance expected by the SSI units from government. From table No. 29 it is clear that the SSI units have expected assistance from government in the form of easy procedures of govt. agencies, lower selling tax an SSI products, lower rate of interest of finance subsidy on raw materials,

official strictures and exclusion of bride in government agencies more subsidy on loan training and seminarcentre for SSI entrepreneurs in each taluk place, marketing facilities price fixation for SSI products in domestic market electricity bill exemption and returns in KEB, control in imported policies compulsory education policy for entrepreneurs land for SSI units concessional rate, abolition of chain system of tax and moderate tax should be exempted. For SSI produces and establishing agency. All the above mentioned kinds of assistance from the government to the survey units would promote the development of SSI in future.

**Suggestions for the Future Prospects of SSI Units:**

SSI units in the study area have given some major suggestions to government like liberal credit policy lower tax more subsidies on loan and greater preferences to SSIs products in government purchases in order to promote SSI development in the backward regions of the state.

**SUMMARY AND CONCLUSION**

A detailed study of the problems and prospects of the SSI units in the Shimoga district has led to the following major finding and conclusions.

1. The SSI unit in the Shimoga district are mainly sole proprietorship and partnership firms of total 97 SSI units 65 (i.e., 67.01 per cent) are on proprietorship and 32 units (32.99 per cent) are partnership, basis, co-operative and company forms of organizations are conspicuous by their absence in the study units.
2. Average investment in plant and machinery in the units is of a small size. It damages betweenRs.5lakhs to 10 lakhs and 11 lakhs to 20 lakh of total 97 units, 46 units are of 5 to 10 lakhs and 43 unitsare of 11 to 20 lakhs, while 7 units are of 21 lakh to 40 lakhs. Remaining only one unit of General Engineering is of high range, which has an investment of Rs. 41 lakhs to 50 lakhs. This suggested that high range investment in existing SSI units in Shimoga district is very loss and much of the investment is in low range. Such small size of investments limits the production capacity of the units and the units fail to realize scale economics.
3. 94 SSI units out of 97 existing units have made outright purchase of their plant and machinery and smaller number of trace of them have resorted to hire purchase/lease methods.
4. KSFC is the chief source of finance to each category of the units, in the district 82 of totally 97 existing units are funded by KSFC 11 units are funded by commercial banks. Private money lenders and ownfunds are the source of only 4 units. These 4 units are present in General Engineering and wood and wooden product categories. This indicates scarcity of own funds in the district.
5. SSI units in Shimoga district are aware of loan subsidy and other incentives schemes given by the government and all of them have obtained these facilities given by the DIC and KSFC.
6. Maximum number of units in each category, except mineral product units, has borrowed the loan as medium term finance, from KSFC and bank. But large number of units in the mineral products category has borrowed the loan, as long term finance. Thus medium term finance has a key role in promoting the SSI sector in Shimoga district than the long term or short term finance.
7. Being large in their number, majority of the food and mineral products categories units (26 and 24 respectively) face the problem of delay in obtaining incentives, given by the government, due to lack of proper and in time information from the government agencies. Remaining units of these categories and majority units of other categories do not face this problem.

8. The SSI units, in four categories namely food, mineral, General engineering and wood and wooden product, mention “high interest cost” and “inconvenient number of instalments”, are their major problem in obtaining their loan finance. Other problems like rigid repayment conditions, inadequate amount of loan etc are mentioned only by food products units. Thus high rate of interest cost and inconvenient number of instalments are the major problems of the four categories units, but it is more crucial problem in food product .category, as more than 50 percent of its units face this problem. They mainly the food products units are threatened by finance problems.

9. The SSI units covered by the study did not experience shortage of working capital. Majority of the units depend on banks and finance companies for their working capital requirements in addition to their own funds.

10. More than 50 per cent of the SSI units mention high rate of interest of banks and finance cooperation. Except stone crushing category inconvenient repayment conditions, bank policies, stringent credit as the major problems in obtaining working capital in each category units in study area.

### **SUGGESTIONS**

Following suggestions are made to ensure efficient internal management of SSI units and to solve some of the genuine problems confronting the small-scale entrepreneurs’ from Shimoga district. If these recommendations are implemented, it is hoped, the growth of small-scale sector will get about. The suggestions are based on the findings of the study covering the 97 SSI units in the Shimoga district.

1. SSI units are being controlled by a number of acts and laws which consumes a lot of time of entrepreneurs distracting their attention from important activities of the entrepreneur’s time in production and marketing government official procedures should be simplified to reduce unnecessary interferences of bureaucratic controls.

2. Official information regarding govt incentives, schemes and programmes should reach the entrepreneurs, without delay at proper time and as quick as possible. A large number of

entrepreneurs complaint is about bribe in the govt. officials. It should be eradicated and official strictness should be maintained.

3. Security to the institutional finance and interest rate should be moderate. Banks and financial institutions should follow a liberal credit policy to meet the working capital requirements of SSI units.

4. The entrepreneurs had to undergo a plethora of complex set of procedures and formalities which delay the sanction and disbursement of assistance as most of the industrial units are one man’s show. If the entrepreneurs devote more time in claiming assistance, their crucial areas will suffer, which will ultimately affect their production sales and repaying capacity. Therefore, the procedure to avail subsidy and other incentives should be made simple and financial institutions be given the responsibility to claim the capital investment subsidy on behalf of the entrepreneurs as KSFC is doing at present. Sanction and disbursement of incentives, particularly investment subsidy should be a time bound programme.

5. Subsidy for finance should be moderate, so that new entrepreneurs are encouraged to establish SSI units in rural and backward areas.

6. Govt. should not encourage the establishment of a large number of industries of same kind of products in the same region. This will increase the severity of competition between the same category units, which will become a reason for sickness in units of these products. Balanced industrial development can be achieved only if government consciously encourages the establishment and development of large number industries, but of different .kinds of products units in the same region.

This reduce regional imbalance in the industrial development, consequently promoting the overall development of backward regions.

7. Govt. should set-up training and seminar centres for SSIs entrepreneurs in each taluks. The centres will help the existence units to increase their awareness about production, management and marketing. This will enable the entrepreneurs to get more profit, and this profit will plough back in the unit. It will increase the investment in backward regions. Also industrial fair, exhibitions, festivals etc, should be organized at taluka levels, to create awareness about industries. This will help the new entrepreneurs to know and enter into the industries sector.

8. from low profile.
